

# PINWORM TEST

## (Instruction for sampling „Scotch Tape Test“)

### SAMPLING:

Samples are taken in the morning in bed, before going to the toilet for the first time and before morning hygiene:

1. Press a **transparent** adhesive tape onto the anus and
2. apply the adhesive strip afterwards **winkle-free** on a glass slide.
3. To avoid breaking the glass, place the slide into a **safe transport container** (e.g. a urine beaker)

Please note that :

- stool samples are not suitable for this analysis
- that you must not go to the toilet or wash, bathe or shower before sampling!

### ATTENTION:

**In addition, it is important for the execution of the microscopic examination that the adhesive tape used is transparent and applied wrinkle-free!**
